

STA 624.01
Applied Stochastic Processes
Spring Semester, 2015
Tue and Thurs 11:00 AM–12:15 PM
Room 335 MDS
Prereq: STA 524 or STA 623 or consent of instructor.

Instructor: Ruriko Yoshida
Office: 325D MDS
E-mail: ruriko.yoshida@uky.edu
Office hours: Tue Thurs 1:00-1:50 PM
(I'm usually available to talk whenever I'm in my office so
feel free to drop in, except two minutes before class starts.)
Text: "Introduction to Stochastic Processes" Lawler

Overview: This is a course on stochastic processes, which involve collections of random variables indexed by time or by space. In this course you will learn the nomenclature and techniques needed for understanding the major types of stochastic processes, how to apply these processes in mathematical modeling, and how to effectively compute and simulate using these processes. We will cover materials including (not limited to) discrete-time and continuous-time Markov Chain, Reversible Markov Chain, hidden Markov Model (HMM).

Course Website: All course materials (including the homework assignments) will be posted on the class website, which you can access using the Blackboard system found at

<http://polytopes.net/courses/STA624S15/>

Homework: Assignments will be weekly, handed out on Friday and due back the next Friday. Typically these assignments contain 4 or 5 regular problems and one computer problem.

While you are welcome to work together on the assignments, the final writeups should be your own. In the writeups, indicate your calculations and reasoning for all the work submitted. For numerical answers, draw a box around your answer and use four significant figures for approximations unless the answer is an integer, or instructed otherwise in the problem statement.

Homework will be graded on a ten point scale 0 meaning that you did not turn in the homework and 10 meaning that Athena, goddess of wisdom could not have completed the assignment any better. You will receive two scores, one for the regular problems and one for the computer work. **ABSOLUTELY NO LATE homework.**

Before handing in your homework paper, please staple all papers together and clearly write your name and the assignment number on the first page. Turn in papers held together by paper clips or origami at your own risk.

The lowest homework score of each semester will be thrown out. This is basically to handle those emergencies where you are unable to complete an assignment for external reasons. I strongly recommend you save this freebie as long as possible and do not blow off an early assignment.

Tests: There will be 2 midterms during the semester, both in class. They will test your ability to recall key definitions and theorems from the class, and apply them to simple problems. In addition, there will be a final exam roughly twice the length of the midterms.

Grading: The regular problems of the homework are worth 20% of your grade, the computer problems 15%, midterm 1 is 20%, midterm 2 is 20%, and the final will be 25%.

Schedule: The following is a tentative schedule. It might be changed.

Feb 26th	Exam 1	
April 23rd	Exam 2	
Tuesday May 5th at 10:30AM to 12:30PM	Final
